

Source: STAT-Harris Poll

Weighted to the U.S. General Adult Population - Propensity

Fielding Period: June 11-13, 2021

- n=2,015 US Public
- n=1,369 Have heard about the FDA Approval of a new drug for treating Alzheimer's

All data highlighted in **RED** is significantly higher, between subgroups (e.g., between White Americans vs. Black / African Americans or Republicans vs. Democrats), based on statistical significance testing using a z-test at the 95% confidence level. See more information on sample and statistical testing below*. Not all percentages add up to 100% due to rounding of decimals.

How concerned are you about Alzheimer's as a public health threat?

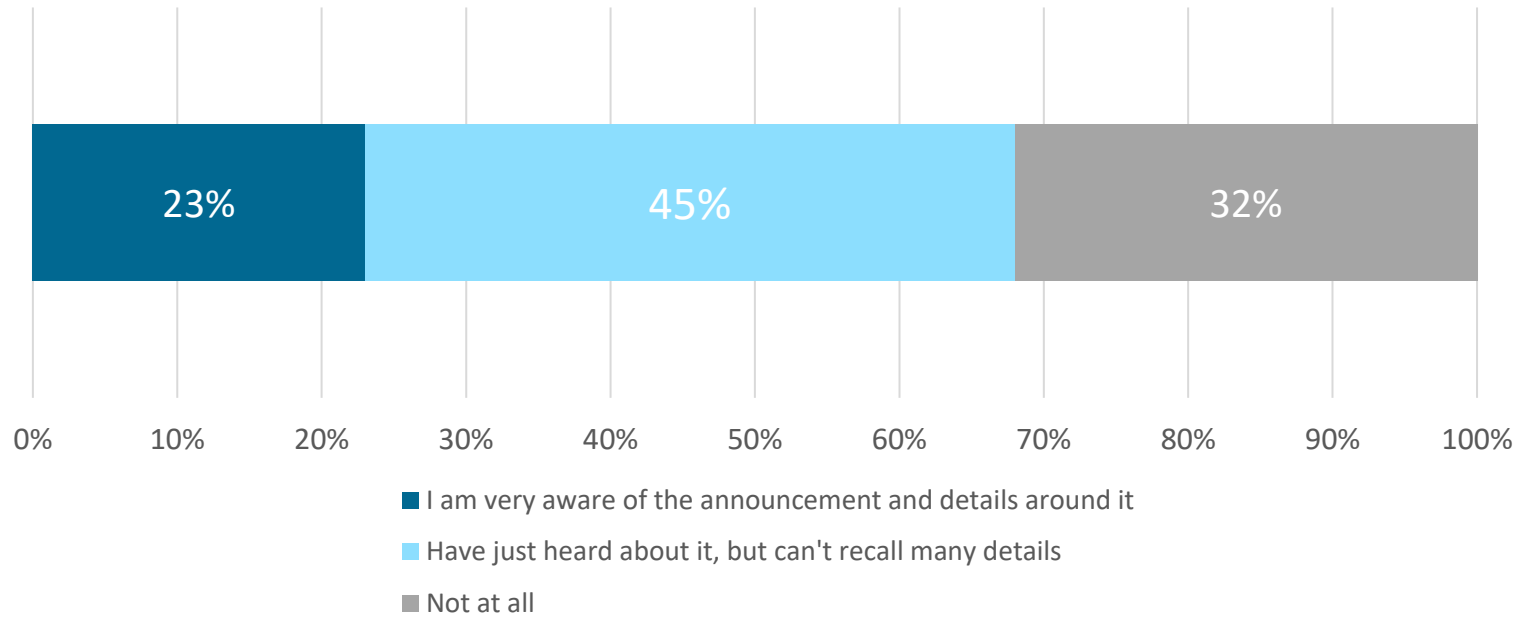

How concerned are you about Alzheimer's as a public health threat?

Based on what you have heard about the approval, how much do you agree or disagree with the following statements?

I'm excited about a drug for Alzheimer's being available

	I am very aware of the announcement and details around it	Have just heard about it, but can't recall many details
Strongly agree	50%	37%
Somewhat agree	30%	39%
Somewhat disagree	7%	7%
Strongly disagree	6%	3%
Not sure	7%	13%

I believe that this drug will be effective

	I am very aware of the announcement and details around it	Have just heard about it, but can't recall many details
Strongly agree	35%	15%
Somewhat agree	31%	42%
Somewhat disagree	13%	10%
Strongly disagree	4%	4%
Not sure	17%	29%

I have concerns about the FDA approval process for this drug

	I am very aware of the announcement and details around it	Have just heard about it, but can't recall many details
Strongly agree	37%	13%
Somewhat agree	30%	38%
Somewhat disagree	14%	24%
Strongly disagree	11%	6%
Not sure	8%	20%

I believe the drug is priced fairly

	I am very aware of the announcement and details around it	Have just heard about it, but can't recall many details
Strongly agree	26%	9%
Somewhat agree	18%	24%
Somewhat disagree	15%	14%
Strongly disagree	20%	11%
Not sure	20%	42%

***Sample and Statistical Testing**

We adhere to rigorous sampling and weighting methods on the front- and back-ends of the data collection process to ensure that our samples are as representative of the target population as possible. For US public surveys, our weight targets are based on US Census data. Per AAPOR guidelines, we don't report on a "margin of error" as online surveys are not based on probability samples. For subgroup differences (e.g., between White Americans vs. Black / African Americans), we conduct statistical significance testing using a z-test at the 95% confidence level.
