Extend Your Swim Season

*Sunwave Solar Pool Heating can extend your present swimming season by three, four or even up to five months! This means you could be using your pool for up to EIGHT or NINE months of the year.**

Think about the number of times (particularly in Spring and Autumn) when the days are just perfect and you'd like a swim, but the water is simply too cold. This is when a Sunwave solar pool heating system can have you enjoying your pool, instead of just looking at it!

Strong and Durable. Manufactured from UV stabilised polypropylene, Sunwave collectors are super tough and durable, providing trouble free solar heating for many years. This ruggedness also makes Sunwave a natural choice in Australia's cockatoo infested suburbs.

Strong Performance. Maximum exposure to the sun, and therefore maximum performance, is ensured by manufacturing the collectors with the heating tubes extremely close together. In addition, the individual tubes are moulded with the header pipes into one piece, eliminating hundreds and hundreds of low pressure joints typically found on many other systems. Please ask to see a sample collector and see for yourself how this feature will provide years and years of benefits to you.

Leading Warranty Coverage. A Sunwave system will provide years of worry-free heating, all backed by the world's largest solar pool heating manufacturer. All Sunwave components carry a 12-year, full parts warranty. In addition, our panels are so durable, we offer a special warranty against cockatoo damage.

*Depending upon your location, weather conditions and comfort requirements.

Save Money. The solar energy you collect will still be free, while the cost of energy for electric pool heat pumps and gas heaters will continue to rise.

More Family Time. School aged children and grandchildren will enjoy your heated pool more during the spring and autumn holidays.

Swim Morning & Night. Enjoy an early morning swim or a romantic evening in the pool. Your pool will now be warmer and more comfortable.

A Healthy Lifestyle. Doctors and physical therapists consider swimming to be one of the most beneficial forms of low-impact exercise. In a heated pool, you can enjoy daily workouts in the privacy of your own backyard.

Add Value to Your Home. A solar energy system can add value to your home and make it more attractive to potential buyers.

Tubes & headers moulded as one, avoiding low pressure barbs and grommets.

Large headers ensure low head loss.

Tubes are extremely close together providing incredible efficiency.

Spacer bars hold tubes off the roof surface, allowing the roof to stay dry & corrosion free.

Polypropylene can withstand years of exposure to the harsh effects of the sun. This ruggedness also makes Sunwave the natural choice in Australia's cockatoo infested suburbs. (Ask us about our warranty against cockatoo damage).

Solar Pool Heating

Solar pool heating is surprisingly simple. Your pool water is pumped through hundreds of individual tubes contained within the collectors lying in the sun on your roof. The heat is absorbed by the water as it travels through the tubes, then it is returned to your pool.

Depending on some individual site conditions, such as amount of sun and wind already on your pool, your water could rise in temperature by six to eight degrees.

On some days, your pool may only need a couple of degrees lift to achieve your comfort level. On these days, the Sunwave controller will automatically turn the heating system off when your desired temperature is reached. Our solar controller will regulate the temperature to avoid summer overheating.

Dimensions & Design Parameters

Specifications	SW170	SW240	SW280	SW350	SW400	SW460
Length	1.4m	2.0m	2.31m	2.92m	3.23m	3.85m
Width	1.2m	1.2m	1.2m	1.2m	1.2m	1.2m
Collector Area	1.68m ²	2.40m ²	2.77m ²	3.52m ²	3.85m ²	4.62m ²
Volume Capacity	7ltr	8.7ltr	9ltr	11.4ltr	11.7ltr	14.4ltr
Material	100% UV STABILISED POLYPROPYLENE					
Max Operating Pressure	600kpa					
Metres of Tube	202m	296m	343m	436m	490m	585m
