

## Operating manual *iks vario 4 pro* version 1.0

1. Please connect the power supply into a 230V outlet.

2. Please connect the plug on the small cable (12V\_) to the „Powersocket“ on the device.

4. After **changing the stock** (or at the beginning of the use) you can easily remove the air from the hose by pressing the switch (T) until there are no bubbles any more.

### Important!

Jod musn't be pumped with another pump than the one marked with "Jod" !

### Programming:

The „*iks aquastar vario 4 pro*“ will be recognised from the *iks aquastar* or *iks aquastar midi* as an switch socket and can be programmed in the same way. Please refer to the operating manual of the *iks aquastar* or *iks aquastar midi* .

There are black rubber-joints (D) on the hoses for **transportation**. Please replace them with the adapters (A). We recommend to use the rubber-joints (D) again for transportation.

3. Please connect the cable from the device direct to L1 or L2 of the *iks aquastar midi*, or to L1, L2, L3 or L4 of the *iks aquastar*.
