

Conflict of Interest. A conflict of interest may exist when an author (or the author's institution or employer) has financial or personal relationships that could inappropriately influence (or bias) the author's decisions, work, or manuscript. All authors are required to report potential conflicts of interest, including specific financial interests relevant to the subject of their manuscript, in their cover letter and on the financial disclosure form or in an attachment to the form. Authors without relevant financial interests in the manuscript should indicate no such interests in the manuscript (see [Authorship Form](#)).⁴

Authors are required to report detailed information regarding all financial and material support for the research and work, including but not limited to grant support, funding sources, and provision of equipment and supplies. Each author is also required to sign and submit the following financial disclosure statement:

"I certify that all my affiliations with or financial involvement, within the past 5 years and foreseeable future (eg, employment, consultancies, honoraria, speakers bureau, stock ownership or options, expert testimony, grants received or pending, patents filed, received, pending, or in preparation, royalties, or donation of medical equipment) with any organization or entity with a financial interest in or financial conflict with the subject matter or materials discussed in the manuscript are completely disclosed."

Authors are expected to provide detailed information about any relevant financial interests or financial conflicts within the past 5 years and for the foreseeable future, particularly those present at the time the research was conducted and up to the time of publication, as well as other financial interests, such as relevant patents filed, received, pending, or in preparation, that represent potential future financial gain. Although many universities and other institutions have established policies and thresholds for reporting financial interests and other conflicts of interest, *Archives of Internal Medicine* requires complete disclosure of all relevant financial relationships and potential financial conflicts of interest, regardless of amount or value. If authors are uncertain about what might constitute a potential financial conflict of interest, they should err on the side of full disclosure and should contact the editorial office if they have questions or concerns. In addition, authors who have no relevant financial interests are now asked to provide a statement indicating that they have no financial interests related to the material in the manuscript. This information is for the editorial office and is not shared with peer reviewers. However, for all accepted manuscripts, authors' disclosure of relevant financial interests and declarations of no relevant financial interests will be published. Decisions about whether financial information provided by authors should be published, and thereby disclosed to readers, are usually straightforward. Although editors are willing to discuss disclosure of specific financial information with authors, the *Archives of Internal Medicine's* policy is one of complete disclosure of all relevant financial interests.

This policy applies to all manuscript submissions, including letters to the editor.
