

Canadian Health Care and Meal Takes Care About Your Wellbeing

A medication for treating erection dysfunction in men Viagra can now be acquired without a prescription. Like almost all drugs, a brand new medication may have a side effects. How is Viagra over-the-counter completely different from regular Viagra, which can be sold by prescription, and what should potential customers consider it before they begin taking these blue pills? Both that and other planning support the same ingredient - sildenafil citrate, but in various doses. Sildenafil citrate is definitely an inhibitor of type 5 phosphodiesterase (PDE-5), whose effect is expressed in that it (by blocking a particular enzyme) expands blood flow in the pelvic organs and therefore contributes to achieving erection. Viagra over-the-counter is a medication recommended exclusively for men with erectile dysfunction. It isn't appropriate for adolescents under the age of 18 (and they still will not be able to buy it in US medication stores), but women will be able to purchase it for partners. Explore more on the [Canadian Health Care and Meal](#) website.

As a general rule: men that learn to choke when performing simple physical exercises - for example, when climbing stairs - shouldn't take the medicine for erection dysfunction. How and where to buy Viagra over the counter? It will be achievable to buy the medication in most pharmacies, but it will not lie on a shelf like aspirin. You will need to go to the pharmacist and request you to provide you with the medicine, while the druggist must ask a number of questions to be sure that it is not damaging for you to take it, and to answer your questions, if any. To achieve this, it will be possible to retire to the discussion room, which are available in most pharmacy.

How successful is this medication? On many occasions, it will help to deal with erection dysfunction, however, not always and not at all. Sildenafil citrate helps to dilate arteries, increase blood flow to the penis, and achieve a harder erection as a result of sexual stimulation. But it should be borne in your mind that the drug itself might not cause an erection if you have no natural attraction to the partner. Viagra over the counter can be taken without regard to intake of food, but its effect may decrease for those who have just eaten well and then took a pill. This drug needs to

be taken approximately one hour before sexual activity. Do not combine Viagra over-the-counter with grape fruit or grapefruit juice, as this may interfere with the normal action of the drug. It is recommended to take a maximum of 1 tablet of 50 mg per day. You will find had an erection for a very long time, you might need several efforts to do it even with Viagra over the counter. Getting a lot of alcohol also can make it challenging to achieve a bigger harder erection. What if a bigger harder erection lasts too long? There have been rare instances when men taking this drug reported a painful or excessively long erection that lasted more than 4 hours. If this happens to you, consult a doctor immediately.

What side effects could appear? A person can have headache, dizziness, blurred vision or cyanopsia (impaired color perception, in which a person begins to see everything in blue), tides, nasal congestion, nausea. Quit taking the drug and immediately seek medical assistance for those who have such serious side effects as: chest pain, sudden deterioration or complete loss in vision, hypersensitive reaction (breathlessness, wheezing, swelling of the lips, eyelids or the whole face), convulsions or loss of awareness.
