Re: Corruption in the California legal system that aids the US Chamber of Commerce in a massive insurer fraud cost shifting scheme, adverse to public health. Egregious violations of the First Amendment of the Constitution with dangerous implications for the future of Democracy in the United States.

Honorable President Obama,

I would like to schedule a meeting with you or a member of your staff. I am whistle blower of how it became a fraudulent concept in US public health policy that water damaged buildings pose little to no harm to human health. I have done a great service for my country and my fellow man, but it has come at great personal cost for myself and my family.

For this service for my fellow man, the California legal system has done everything possible to try to discredit me on behalf of the interests of the affiliates of the US Chamber. Now, they are seeking to abuse the courts again by having me gagged from writing of how the fraud in policy came to be under the Bush Administration and how the California courts have aided and abetted it to continue by aiding with a strategic litigation carried out by criminal means, by authors of medico legal, fraudulent policy for the US Chamber.

While this is a shameful recent history for the United States, it must come to public light. That is the only way to stop the now deeply embedded fraud in policy that continues to harm so many US citizens, while shifting the cost of illness off of insurers and onto taxpayers. Lives continue to be ruined. Democracy is greatly at risk. Fear of retribution for speaking the truth in America appears to be rapidly becoming more justified as a legitimate fear, when the interests of the US Chamber are involved.

Please let me know when you or a representative of the White House will be available to meet. Thank you in advance for helping to assure the interests of US Chamber of Commerce do not supercede the health and safety of the public or supercede Democracy in the United States of America.

Sincerely,

Attached: Letter to Eric Holder
