

Today, 60 million people are within 20 miles of
a future 1,075-mile-long high-speed rail corridor.

Tomorrow, no two people will be more than 5 hours away from each other*

*and most people will be much closer than that.

WhoWhatWhenWhereWhy

Linking populous regions more than 500 miles apart with high-speed rail once seemed unthinkable. That was before China deployed new advances in technology for its 818-mile Jinghu high-speed railway between Beijing and Shanghai, opening in 2011. Trains cruising at 220 mph with top speeds of 240 mph have brought China's two largest cities to less than four hours apart. Just as importantly, the rail line has linked them to 18 populous business centers in between, like Tianjin, Nanjing and Jinan.

This report proposes a high-speed rail corridor in the United States of similar length and with similar population, economic and travel affinity characteristics. Two of America's most populous regions are the Northeast and Midwest. Their economic capitals are New York City and Chicago, also two of America's largest cities – 880 miles apart. Add in the nation's capital plus five other metropolitan areas of more than 2.3 million people each, and you have a potent high-speed rail market.

In fact, in 2009, the group America 2050 identified 50 travel markets in the United States, each which could be suitable for developing high-speed rail. A single high-speed rail corridor linking the Midwest and Northeast would be able to serve one-fourth of the top 50 city-pairs America 2050 identified. Also, four of the Air Transport Association's top 40 airline travel markets, including #3 Chicago-New York, would be served (see charts at right).

America's top 50 high-speed rail markets: (lists only those in proposed Midwest-Northeast HSR Corridor)

Rank	City-Pair	Score
1	New York-Washington	100.00
11	Chicago-Detroit	91.09
13	Chicago-Columbus	89.42
16	Chicago-Cleveland	88.71
19	Columbus-Washington	88.21
20	Cleveland-Washington	88.13
21	New York-Pittsburgh	88.03
24	Detroit-New York	87.47
26	Detroit-Washington	87.27
27	Cleveland-New York	87.25
28	Philadelphia-Pittsburgh	87.23
30	Pittsburgh-Washington	86.69
34	Detroit-Philadelphia	86.30
40	Cleveland-Philadelphia	85.99
49	Columbus-Philadelphia	85.24

Above: South Korea's KTX high-speed rail line opened in 2004 between Seoul and Busan, with a branch now under construction to Gwangju-Songjeong. KTX moved mountains and built cities, including at this once-rural station at Cheonan-Asan near Seoul.

Left: Berlin's new \$1 billion central train station, or hauptbahnhof, unites high-speed and conventional trains on multiple levels. When this station opened in 2006, it became the largest in Europe. It sees 1,800 trains and 350,000 passengers daily.

Comparing HSR Corridors in China and the United States

Jinghu (Beijing-Shanghai) High-Speed Railway

Stations and their county-level city or district populations:

Beijing = 13.3 million
Langfang = 0.7 million
Tianjin = 3.8 million
Cangzhou = 0.5 million
Dezhou = 0.4 million
Jinan = 2 million
Taishan = 0.6 million
Qufu = 0.1 million
Zaozhuang = 0.5 million
Xuzhou = 1.8 million
Suzhou = 0.2 million
Bengbu = 1.1 million
Chuzhou = 0.1 million
Nanjing = 3 million
Zhenjiang = 0.6 million
Changzhou = 1 million
Wuxi = 1.1 million
Suzhou = 1 million
Kunshan = 0.7 million
Shanghai = 19 million

**TOTAL = 51.5 million people along 818 miles
(62,958 people per route-mile)**

Midwest-Northeast (Chicago-New York + branches to Detroit and Washington DC) High-Speed Railway

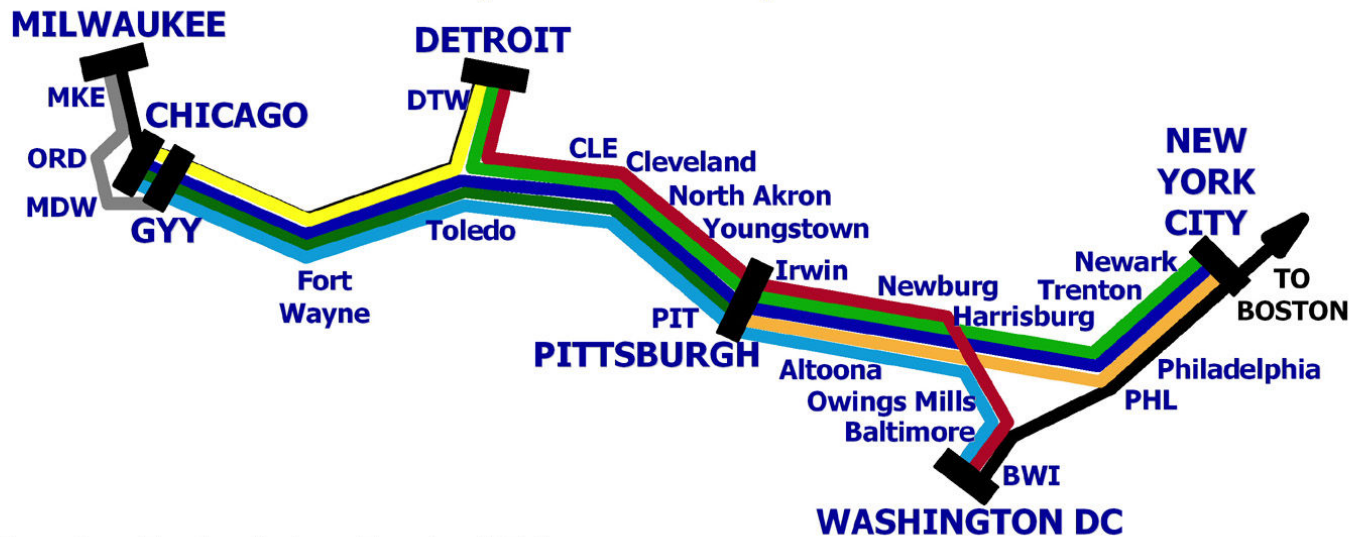

Potential stations and their Consolidated Metropolitan Statistical Area populations:

Chicago = 9.7 million
Fort Wayne = 0.6 million
Toledo = 0.7 million
Detroit = 5.7 million
Cleveland = 2.3 million
Akron-Canton = 1.1 million
Youngstown-Warren = 0.7 million
Pittsburgh = 2.9 million
Altoona = 0.1 million
Harrisburg = 0.5 million
Baltimore = 2.7 million
Washington DC = 5.4 million
Philadelphia = 5.8 million
New York = 22.2 million

**TOTAL = 60.4 million people along 1,075 miles
(56,186 people per route-mile)**

Midwest-East Coast HSR

Proposed service patterns

Service Endpoints: Fastest Trip

- Milwaukee-Gary Airport Local: 1 hour, 15 minutes
- Chicago-New York City Express: 4 hours, 20 minutes
- Chicago-Washington DC Express: 4 hours
- Chicago-Detroit Regional: 2 hours
- Chicago-Pittsburgh Regional: 3 hours, 40 minutes
- Detroit-Washington DC Express: 3 hours, 50 minutes
- Detroit-New York City Express: 4 hours
- Pittsburgh-New York City Regional: 3 hours, 15 minutes
- Connecting routes

Other city pairs: Fastest Trip

- Chicago-Cleveland: 2 hours
- Detroit-Cleveland: 1 hour, 5 minutes
- Detroit-Pittsburgh: 2 hours
- Chicago-Philadelphia: 3 hours, 50 minutes
- Detroit-Philadelphia: 3 hours, 30 minutes
- Cleveland-New York City: 3 hours
- Cleveland-Washington DC: 2 hours, 45 mins
- Detroit-Baltimore: 3 hours, 30 minutes

Implementation

All Aboard Ohio is first seeking a high-level feasibility study of linking the Midwest and Northeast-based high-speed rail systems with a rail corridor designed for up to 240 mph but regular cruising speeds of 220 mph as is now permitted by steel-wheel on steel-rail technologies. These speeds are comparable to maglev but offer far lower costs and much greater operational flexibilities. Feasibility studies of advanced high-speed rail have been undertaken or about to get underway for the Northeast Corridor, four Chicago-based Midwest routes (including to Cincinnati, Toledo and Cleveland), as well as an extension 110-mph Keystone train service west from Harrisburg to Pittsburgh.

Because of the timelines associated with a project of this magnitude and the need for evolving the expansion of local, regional and intercity transit links, as well as scaling up center city densities, All Aboard Ohio seeks an interim service. This could constitute 4-8 daily round trips at 90 mph over enhanced rail freight corridors. After the 220 mph rail corridor is built, the interim service could remain in place as a local feeder service, or be reduced/removed to leave a greatly improved rail corridor for freight customers.

After planning, design, funding procurement, property acquisition and construction are completed, segments may enter service in phases, below.

MIDWEST-EAST COAST @ 220-MPH HIGH SPEED RAIL
